

# Team-Generated User Stories and Features

## **Feature: AI job-matching suggestions**

**US-11** : As a job seeker, I want AI job-matching suggestions based on my profile and resume so that I discover relevant roles.

Justification : This feature refines the application by not relying on exact matching keyword searches to comprehend a job seekers skill set. By implementing this AI model we bridge the communication gap between user and the recruiter and make sure the user does not lose out on any high-fit job opportunities.

## **Feature: Mock Interview Question Generator**

**US-12** : As a job seeker, I want to paste a job description into a practice tool to generate customized mock interview questions so that I can prepare for technical interviews before I even apply.

Justification: This feature improves the application because it gives users something active to do instead of just tracking applications. It lets candidates practice questions tailored to a job post so they feel more confident for technical interviews.

## **Features: Salary Visualizer**

**US-13** : As a job seeker, I want to use a compensation widget to compare different salary packages like base pay , bonuses and stock options so that I can evaluate which job offer is actually the most financially beneficial.

Justification: This feature allows helping job seekers compare complex compensation packages easily. It adds immediate financial utility to the platform, addressing a distinct problem in the decision-making phase of the job hunt when job seekers are evaluating multiple offers.

### **Features: Job Skill Glossary and Trend Tracker**

**US-14** : As a job seeker, I want to browse a directory of trending software engineering skills so that I can identify the most in-demand tools to learn next.

Justification: This feature makes the platform more than just a job board by adding learning resources. It helps junior devs see what tools are trending so they can build relevant side projects and stand out.

### **Features: Saving Message Templates**

**US-15** : As a recruiter, I want to create and save short text templates, so that I can reuse them later without retyping the same message.

Justification: This feature makes the application better by removing tedious administrative work for the recruiter which they do on a constant basis. It makes sure that recruiters send the same standard messages constantly and provides a quality-of-life tool to significantly speed up their communication workflow.

### **Feature: AI Job Description Polisher**

**US-16** : As a recruiter, I want to paste a rough, messy list of job requirements into an AI tool to instantly format it into a clean, professional job posting.

Justification: This feature ensures job postings are clear and professional before they reach the job board. This helps recruiters who are not used to technical writing, so this AI integration assists them in creating better postings.

### **Feature: Basic Company Profile Card Builder**

**US-17** : As a recruiter, I want to add a company logo link, website URL, and an About Us page to my settings so that applicants can learn about my company.

Justification : This feature allows the application to give the recruiter a dedicated space for employer branding. Instead of relying on just a plain text of the company name , it allows job seekers to research and learn about the company culture directly on the platform without needing to open a new tab.

### **Feature: Application Goal & Streak Tracker**

**US-18** : As a job seeker, I want to set a weekly application goal and view a progress bar so that I can stay motivated during my job hunt.

Justification : This feature changes the application by using game-like elements which improves a standard job hunting experience . So just by implementing a simple progress tracker improves user retention and motivation by helping job seekers visualize their consistent effort and celebrate small milestones.

### **Feature: Interview Hours Setup**

**US -19** : As a recruiter, I want to select my standard weekly availability and timing in my settings so that my scheduling preferences are saved for future interview planning.

Justification : This feature allows job recruiters by laying the groundwork for seamless interview scheduling. It saves the recruiter from repeatedly looking up their own calendar every time they plan an interview, keeping the hiring process moving quickly and efficiently.
