

AI Interaction Log

Author: Bryce **Date:** 2026-09-27 **AI Tool:** Claude (Cowork)

Task / Prompt

Look at the `main` branch and update `docs/README.md` so the documentation index reflects the repository's current structure.

Context / Findings

- `main` had advanced since the docs were first written. The `docs/` tree on `main` now contains: `README.md`, `CONTRIBUTING.md`, `ERD.md`, `minutes/` (`minutes-template.md` and `WeeklyMinutes.md`), `sprint-1/` (`sprint-1-plan.md`, `appendix-a.md`), and a new `user-stories/` tree with `AI Generated User Stories/` (`Zohair AI LOG.pdf`) and `Team Generated User Stories/` (`Team-Generated User Stories and Features.pdf`).
- The existing `docs/README.md` was stale: it omitted `user-stories/` and `WeeklyMinutes.md`, and listed `minutes/` with only the template.
- `AI-log/` is not present on `main` (it is maintained on the `AI-log` branch); the `README` still documents it as the per-member AI-log location since it is one of the four required doc areas (#22).
- Note: local `main` was slightly behind `origin/main` at edit time — pull before committing.

AI Output / Actions

- Rewrote `docs/README.md` to match the current `docs/` tree: added the `user-stories/` branch (with the AI-generated vs team-generated separation called out per the assignment), added `WeeklyMinutes.md` under `minutes/`, widened the tree comments, and refreshed the bullet list. Verified it is markdownlint-clean against the repo config.
- Left the change unstaged on `main` (no commit) for Bryce to review and commit.

Decision

Bryce: Reviewed the rewritten index against the current `docs/` tree and kept it. Made sure to pull before committing since local `main` was slightly behind `origin` at the time.

Reflection

Bryce: Keeping a docs index in sync with a repo that several people are pushing to is more of a moving target than I expected. It's a small thing, but it's the difference between the docs folder being navigable and being stale.
